(54) Title: FRAMING SYSTEM AND METHOD FOR ASSEMBLING THE SAME

(57) Abstract: A framing system has a plank member with ribs protruding therefrom and a frame member with a receptor pocket therein such that the rib of the plank member is resiliently engaged within the receptor pocket of the frame member to secure the plank member to the frame member. The plank member may also be laterally moved relative to the frame member such that the ribs slide within and engage the receptor pockets. The invention is also directed to a method for engaging the plank member with the frame member along with a method for fabricating the frame member.
